# Vertical Blinds

GRAPHIC STYLE AND ELEGANCE  
FOR CONTEMPORARY HOME AND WORK INTERIORS

# Vertical Blinds

## A sleek, modern way to control light and protect privacy

For contemporary home and work environments, Luxaflex® Vertical Blinds are a way to control light, heat and privacy while also enhancing aesthetic appeal and preserving views. What's more, they're highly versatile. Vertical blinds adapt readily to architectural challenges, such as floor-to-ceiling expanses of glass and unusual-shaped windows.

### Contemporary elegance, exceptional practicality

Available in a wide range of fabrics, including translucents and textures, Luxaflex Vertical Blinds provide a graphic element to interior style. They give the impression of height, which accentuates the sense of light and space in feature rooms. And they always hang straight, so finding a window shade solution for angled and curved glass is not a problem. For homes and commercial premises with fantastic views, vertical blinds can be easily positioned for minimal obstruction.

The practicality of vertical blinds has given them a worldwide following. Variable blade positioning makes it easy to control light and heat from the sun. Vertical blinds can also be used for blockout - 200° closure ensures there's minimal light leakage between blades. To allow door access, blades can be easily retracted. As you can imagine, cleaning requirements are minimal because vertical blades don't provide 'shelves' for dust. An occasional wipe with a damp cloth is all that's needed.

### Benefits

- Elegant architectural aesthetics
- Efficient light and heat control
- Blades can be angled for minimal view disruption
- Narrow stack allows more glass to be exposed
- Headroom is maintained for sliding and French doors
- Vertical blades don't collect dust
- Can be used with unusual window shapes

## For apartments and houses

The simplicity, practicality and graphic elegance of Luxaflex Vertical Blinds makes them ideal for contemporary homes and apartments. They can be used in living and bedroom environments for controlling light, shade and privacy. They can also be used in areas, such as kitchens, bathrooms and laundries, because the blades are made from high performance fabrics.

## For workplaces

With Luxaflex Vertical Blinds it's easy to make the most use of natural light, which is preferred by people working in office environments. Maximising natural light also helps to reduce the cost of lighting. When sunshine makes working conditions uncomfortable, blades can be adjusted to provide partial or complete shade.

## For large sliding and folding doors

Vertical blinds won't reduce head space on sliding and French doors, because they stack vertically. To allow doors to be used, blinds can be easily retracted. When retracted, the stacked blades occupy minimal space, so that views are maximised. Stacking options include one way draw to the left or right, two way draw, or centre stacking.

## For irregular-shaped windows

Vertical blinds always hang straight down, so they can be used with angled window shapes. For architecturally-designed homes and workplaces with unique window features, Luxaflex vertical blinds are an intelligent light and privacy control solution.

# Your choices

## Fabrics

Blockout	Choose a blockout fabric if you want darkness and privacy in bedroom and living areas. Available in a range of monochromatic shades and contemporary textures.
Translucent	A smart choice if you want light and privacy at the same time. Light filtering fabrics are available in a range of opacities, colours and textures.

## Slat finishing

Three options are available:

Traditional finishing with weights and chains.

'Earless' weights without chains.

Fully sewn-in weights (additional cost).

## Stack options

Three options are available:

Right stack

Split stack

Centre stack

## EOS® track

The EOS track system includes an extruded aluminium alloy section (45mm deep by 25mm high) and a clutch mechanism to turn the slats.

The narrow blade travellers are completely drawn against the end cap when the blind is opened, so that the blade stack is reduced to a minimum.

The headrail and other visible components are slim and elegant.

The blade stack can be moved to the opposite side of the track by releasing the end stop. This is handy when windows need to be cleaned.

Operation is smooth and easy, even when blinds are very large.

Blades are always equally spaced and sure to hang straight, due to the self-alignment mechanism in the slat traveller.

If a hook is damaged, it can be easily replaced without dismantling the headrail.

## Control operations

Standard cord control

Child-safe option with no hanging cords (optional)

## Track finishes

Tracks may be finished with inserts that co-ordinate with fabric selection or self-finished using the EOS round front profile.
